

Silver 3D

Silver 3D, a specialty projection screen fabric designed to optimize stereoscopic, two channel 3D displays

Silver 3D, a specialty projection screen fabric designed to optimize stereoscopic, two channel 3D displays. Silver 3D employs special metallic elements, formulated to preserve light polarization. The high gain and high contrast of the fabric help compensate for the losses incurred when using polarization filtration technology.

FEATURES

- Enhances 3D effects
- Preserves stereoscopic images
- Minimizes depolarization of projected light
- High contrast levels
- Utilize with one of Stewart's fixed frame models or multi-masking systems
- Optional CinemaPerf available for acoustic transparency
- Available in seamless sizes up to 40' x 90'
- Flame retardant
