

# UltraMatte 200

The UltraMatte 200 is over 100% brighter than matte-white material

UltraMatte 200 is a flexible front projection screen material that is color corrected for use with CRT's and works extremely well with slide and film projectors. The UltraMatte 200 is 100% brighter than matte-white screen surfaces. This high-gain screen surface is an excellent choice for large screen formats. UltraMatte 200 has the largest seamless sizes available in the industry.

## FEATURES

- Over 100% brighter than matte-white material
- Higher gain for low output projectors
- Superb color and white field uniformity
- Excellent for use in large-scale applications
