

Daily Dual

The Daily Dual screen system enables seamless switching from 2D to 3D viewing with two screen surfaces in a single screen frame

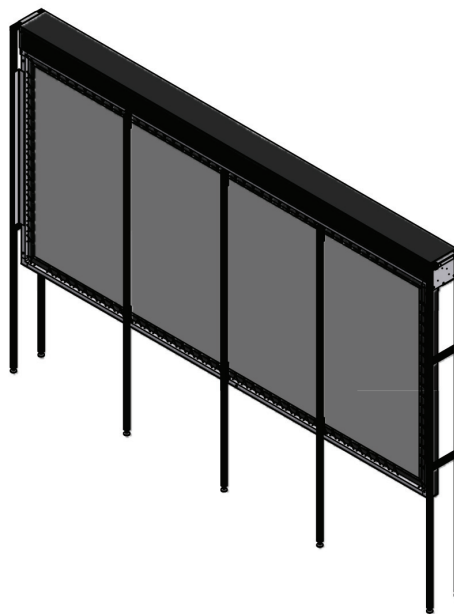

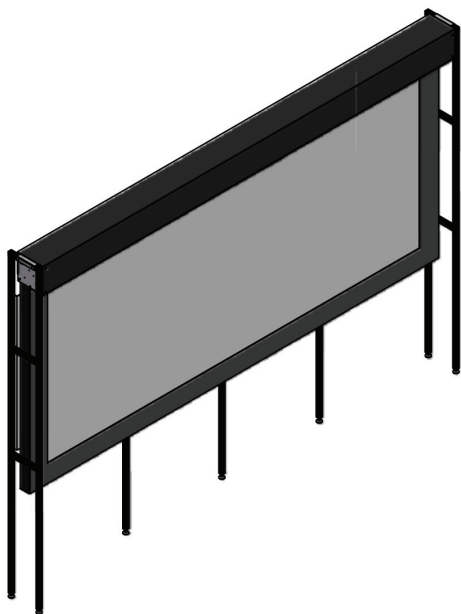

Daily Dual

The Daily Dual is Stewart Filmscreen's solution for screening rooms and multipurpose rooms that have the need for two screen surfaces ready-available in the same frame. The patent-pending Daily Dual delivers high performance flexibility to create the optimum viewing experience for any occasion.

As the demand for 3D in the home continues to grow, dealers and installers need to respond by adding silver screens to their portfolio, the Daily Dual allows existing rooms to be quickly and cost-effectively converted to dual 2D/3D screen functionality. Users can easily select the desired screen, instantly switching the configuration from one format to the other without any need for room conversion or additional setup time.

The patent-pending Daily Dual also allows users to select the ideal image surface for each screen's application, with any Stewart screen material available. A multi-purpose media room could feature a FireHawk G3 material for enhanced viewing of sporting events in daytime ambient light situations and a StudioTek 100 G3 for critical reference environment viewing of Blu-ray movies. In use, each surface appears as a beautifully matted permanently framed installation, but only one of the surfaces is fixed. The other is an electrically operated roller screen that descends into a shadow box mask. The configuration allows operators to go back and forth from one surface to another at will, either at the touch of a button or a serial controller command, eliminating setup time and room cross booking conflicts.

The Daily Dual is fully compatible with all Stewart screen materials, allowing any surface to be used for either screen.
