Half Gain	Lambertian	Lay Flat Quality	Excellent
Ambient Light Rejection Value	15%	Flame Resistance	Yes
Ambient Light Resistance	NA	Perforation Options	Yes

Our most requested residential fabric, **StudioTek 100** is a flexible, front projection, matte white screen material formulated to meet the strictest color and white field uniformity standards. This unity gain, reference material is an optimal diffuser and disperses light in a near perfect, hemispherical distribution so that image brightness is virtually unchanged when viewed from any angle. The extremely wide viewing cone necessitates careful management of the reflected light in the viewing environment. **StudioTek 100** is a great choice when ambient light can be controlled. Exclusively made by Stewart to deliver enhanced focusing capabilities for detailed on screen content.
