Producers of Professional Projection Screens

The **AT 3.0** frame uses a 3 inch diameter aluminum tube and works with flexible, front projection fabrics up to 40 by 90 feet. For rear projection, aperture mounted applications, the **AT 3.0** will work with the same limits and will also free stand to create images up to 13 by 23 feet. The **AT 3.0** utilizes shock cord and S-hook fabric mounting—super quick, and super accurate. These fixed framed screens can be configured to wall mount, stand mount, or be used as a flyer. As shown above, the complete line can be ordered bare bones with frame and lacing for use behind set pieces, or the screen can be masked with an overscan, stray light absorbing border. Need a curved screen? The **AT 3.0** can be curved to any specified radius down to 12 feet.
