*Established by quoting the smallest size screen available without any upgrades or optional features.

Cascade is a sleek yet compact, above ceiling, electrically operated screen system with a rich feature set. Electrical hookups and future upgrades can be easily made without ripping the ceiling open thanks to a slotted, self-flanged bezel with a fastener free dust cover. **Cascade's** low profile case is only 8 inches tall and will support up to a 12 foot 11 inch wide image area. Available in a full range of Stewart's 16K+ screen materials. Also available with vertical or horizontal masking.
