Motors	120V / 220-240V						NA

*Established by quoting the smallest size screen available without any upgrades or optional features.

Thoughtfully and thoroughly engineered, **CineCurve** is a curved frame system with optional independent, digitally controlled masking panels which matte the vertical edges of the screen accurately and with continuous variability. Additionally, we offer a wide range of acoustically transparent, masking fabrics. Each fabric is balanced for optimal sonic and visual performance. **CineCurve** furnishes cinematic envelopment reminiscent of the curved Scope screens developed for widescreen formats using anamorphic lenses. We are happy to specify and optimize the radius of the screen for today's anamorphic projection lenses, or furnish a radius based on your seating and aesthetics. Truly wow-worthy.
