

Projector Port

Rigid Frame Systems for Projector Port Glass

Keep audio and video noise out of the viewing area

The Reference for Stunning™

We use only high clarity, anti-reflective glass

All glass is not the same. We are particular about the glass we use, and we have sourced our glass to provide the highest quality in image fidelity.

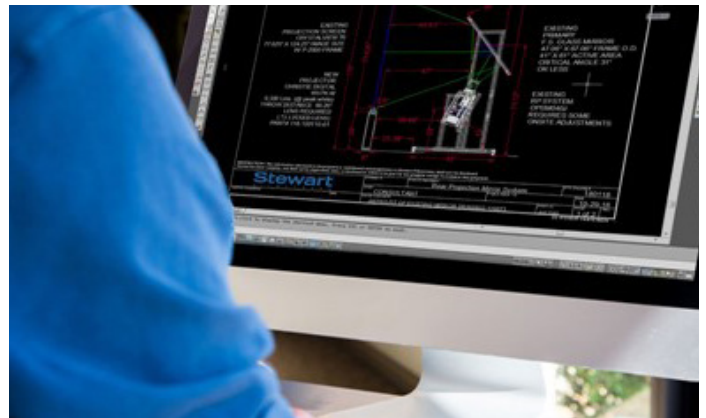

One size does not fit all

When jobs go into the totally bespoke zone, we're fine with that and we'll support your construction team for a custom framed, integral build. We make sure you get exactly what you want.

We know how to build a better projection port

When designing and manufacturing our custom projector ports, we know how to position glass for optimum, low reflectivity and for maximum sound transmission prevention.

Stewart designs and builds a wide range of superior quality, pre-glazed projector ports which are customized to fit either a single projector or multiple projectors, as needed. Both, single pane and sound isolating, dual pane versions are available. Our competitors can't even come close to matching the specificity and performance of our ports.
